

## Activities

### Replication Activities

- Model articulation
- MEL
- Cost/benefit analysis
- Prevention commissioning

### EI<sup>3</sup>

- Early
- Intensive
- Family-focused
- Play-based
- Specialist and expert
- Direct, face-to-face
- Nurturing
- Parent coaching
- Transdisciplinary
- Single contact point
- Reliable
- Community liaison
- Training
- Mutual family support

## Summary Intermediate Outcomes

### Parents of babies and toddlers with neurodisabilities:

- Are better able to identify and understand their own personal needs
- Learn how to best support their child and how to integrate therapy into daily life
- Feel more confident and empowered as parents
- Are better able to get what they need
- Are better able to support other parents

### Babies and toddlers with neurodisabilities:

- Are better able to learn when neuroplasticity is highest
- Experience increased motivation to learn and decreased frustration
- Make accelerated progress in learning the foundational skills of early childhood development
- Have enhanced relationship and attachment with parents

**Local authority and health commissioners** are incentivised to invest in early intervention  
**Existing providers** replicate Pace's model of early intervention provision  
**New providers** replicate Pace's model of early intervention  
**Voluntary sector funders** (particularly charitable trusts and foundations) can redirect funding to other areas

## Strategic Outcomes

Babies and toddlers with neurodisabilities are better able to engage in the skills and occupations of early childhood

Babies and toddlers with neurodisabilities experience fewer physical health problems

Parents of babies and toddlers with neurodisabilities are better able to meet their child's needs

Babies and toddlers with neurodisabilities and their parents have better mental health, well-being and resilience

## Wider Outcomes

Babies and toddlers with neurodisabilities have the opportunity to reach their full potential in future life

Babies and toddlers with neurodisabilities require less expensive education, health and social care in future life

Parents of babies and toddlers with neurodisabilities are better able to meet their child's needs

Parents of babies and toddlers with neurodisabilities have better mental health and experience less family breakdown

**Social return on investment**
